

All IPNET GUARDMAN controllers are supplied complete with GUARDMAN access management PC software at no additional cost.

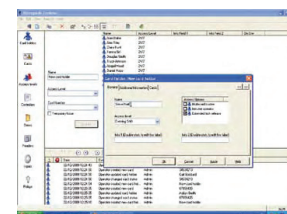

Graphical User Interface

Controllers

Cards

Keyholder

The IPNET GUARDMAN software suite is an extremely user-friendly and intuitive package that provides a wealth of access control functionality in addition to some innovative and very useful features. Following Microsoft Windows® convention ensures that you feel immediately at home and can familiarise yourself with the controls in a matter of minutes. This also minimises the need for any specialist training saving you both time and money.

Based around the trusted Microsoft SQL Express database engine, IPNET GUARDMAN software provides the user an easy to use access control solution.

FEATURES

- IPNET GUARDMAN software is easy to install and use for the control of IPNET GUARDMAN access control units
- IPNET GUARDMAN software can be used to manage between 1 and 200 controllers
- Every IPNET GUARDMAN controller is supplied with this software free of charge
- A getting started feature takes you through a step-by-step process from successfully bringing the first controller on-line to validating the first card
- Included is a Controller Wizard that automatically detects and guides you through the setup of controllers greatly reducing commissioning time
- IPNET GUARDMAN controllers can be connected to serial ports, TCP/IP ports or a combination of both providing maximum flexibility
- Full context-sensitive help provides you with concise information precisely when you need it
- Anti-passback and man trap (interlock) features of the controller are fully supported
- Fire door release feature allows the interfacing of the IPNET GUARDMAN system to a fire panel. Release selected doors in the event of the fire alarm being activated
- An enrolment reader feature allows you to specify any reader in the system on which cards can be enrolled. Removes the need to purchase a separate enrolment reader thereby saving you money
- Dual custody feature requiring at least two people to present their card is ideal for higher security applications or areas
- Automatic card expiry increases security and also is useful in visitor and club applications.

Graphical User Interface

IPNET GUARDMAN provides an extremely easy-to-use graphical user interface (GUI). Upon starting the software for the first time, a Getting Started wizard assists in the setting up of the system for simple commissioning. IPNET GUARDMAN presents the user with a display of real-time events allowing quick viewing of live system activity. Logging-in is a straightforward process and gives access to all of the administration functions of the software.

Controllers

Upon connecting a controller to the network, it is immediately detected by the software which guides the user through it's configuration.

A listing of controllers gives an instant view of the controller names and status allowing the user to quickly identify those that are online or offline.

Cards

IPNET GUARDMAN allows the configuration of enrolment readers, meaning that any of the readers within the access control system can be used to add a card number to the database, without the need to type it in saving time and eliminating errors.

A list of all of the cards in the system showing who it is issued to, its status and when it was last used provides immediate and accurate information.

Keyholder

Adding keyholders and issuing them with a card takes seconds. Simply enter the keyholders name, pick the access group to which they are to belong, enter the key number (or present the card to a configured enrolment reader) and click on Update. It really is as simple as that.

Additional configurable information fields provide a means of recording more data against each keyholder.
